

# CSS tricks

## you should know

## Make your cursor more interactive

CSS can be used to generate a bunch of mouse cursors that can make your page more interactive

CSS

```
.move{ cursor: move; }  
.not-allowed{ cursor: not-allowed; }  
.progress {cursor: progress;}
```

## Turn your **cursor** into an **emoji**

If you want to turn your cursor into an emoji use this code.

html

```
<body>
  <button class="happy">Are you happy?</button>
  <button class="sad">Are you sad?</button>
</body>
```

CSS

```
.happy {
  cursor: url("https://s3-us-west-
2.amazonaws.com/s.cdpn.io/9632/happy.png"), auto;
}
.sad {
  cursor: url("https://s3-us-west-
2.amazonaws.com/s.cdpn.io/9632/sad.png"), auto;
}
```

paste url of  
emoji source

This is how the cursor  
will look like on hover:

Swipe →

## Make a circle

If you want to make a circle using CSS  
use the code below

html

```
<div class="circle"></div>
```

output

css

```
div.circle {  
    width: 300px;  
    height: 300px;  
    background: #FF355E;  
    border-radius: 50%;  
}
```

Swipe →

## Change caret color

If you want to change the color of caret  
use this code

html

```
<input class="example">
```

css

```
.example {  
    caret-color: red;  
}
```

\*\*\*

Slobal|

color of the  
caret is red

Swipe →
